

This piece of software is required for **server licenses, try-out licenses and student licenses**. Students and try-outs must install it on the same pc as SCIA Engineer.

The FlexNET setup is also included in the installation of SCIA Engineer and is automatically executed if either 'try-out' or 'student' is chosen during installation. It installs the "**Scia Licence Server**", which can be found in your list of programs after installation.

It will install an "**Activation manager**" and a "**FlexNET License administrator**".
