### **1** Introduction

*CADS Revit SCIA Engineer link* facilitates the bi-directional exchange of members, loads and supports between Autodesk Revit and SCIA Engineer and in doing so plays a vital role in the overall Building Information Modelling (BIM) process. A structure modelled in Revit can be transferred to SCIA Engineer for structural analysis and design using *CADS Revit SCIA Engineer link*. When the structural analysis and design has been completed in SCIA Engineer, the updated model can be sent back to Revit. The modelling - analysis - design process requires numerous iterations to arrive at the final design. *CADS Revit SCIA Engineer link* will save time by avoiding duplication and reducing errors.

This Getting Started guide will help you with instructions on how to install the software and make the best use of *CADS Revit SCIA Engineer link* to manage your BIM process successfully.

The Content libraries in Revit are stored as a collection of the *Revit family (\*.RFA)* files. Please ensure that the country specific libraries are installed on the system while installing Revit.

## 2 Compatibility

*CADS Revit SCIA Engineer link* is shipped with a *Release Notes* document which lists the versions of Revit and SCIA Engineer with which it is compatible. You can also find this document in the following folder:

C:\Program Files\Revit To SCIA Engineer\Revit20xx\Docs

C:\Program Files folder is the default installation folder for CADS Revit SCIA Engineer Link.

Revit To SCIA Engineer X
Destination Location
Setup will install Revit To SCIA Engineer in the following folder.
To install into a different folder, click Browse and select another folder.
You can choose not to install Revit To SCIA Engineer by clicking Cancel to exit Setup.
Destination Folder
C:\Program Files B <u>r</u> owse
< <u>B</u> ack <u>Next&gt;</u> Cancel

Figure 2-1: CADS Revit SCIA Engineer Link installation folder

*Revit20xx* is the Revit version number on which *CADS Revit SCIA Engineer link* is installed.

### **3 Workflow**

CADS Revit SCIA Engineer link supports the following workflows:

#### **3.1 Revit to SCIA Engineer round trip**

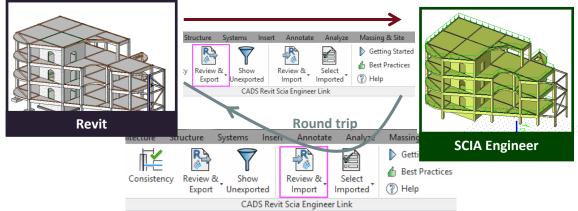

Figure 3-1: Revit to SCIA Engineer round trip

#### **3.2 SCIA Engineer to Revit round trip**

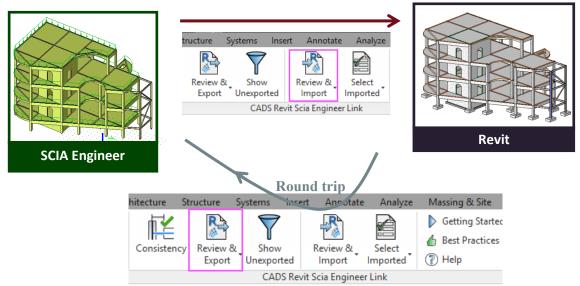

Figure 3-2: SCIA Engineer to Revit round trip

### **4** Installation

This section sets out how to install CADS Revit SCIA Engineer link on various system environments.

If you wish to have a direct link between Revit and SCIA Engineer, you should have both applications installed and licensed on your system.

If only one of the applications is licensed (i.e. Revit or SCIA Engineer) and you wish to share your model with your colleague then you need to use the file based transfer method. This means, you will have to create a *\*.R2S file* from either of the applications and then import it into the other application.

*ESA RevitLink (ESA.21)* module should be licensed as part of the SCIA Engineer installation to exchange models in between Revit and SCIA Engineer.

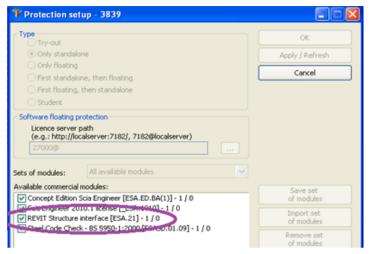

Figure 4-1: SCIA Engineer - Protection setup dialog

Note:

We suggest that you uninstall the previous version of CADS Revit SCIA Engineer link before starting the installation of the latest version of CADS Revit SCIA Engineer link.

The mapping databases is updated in the latest version of CADS Revit SCIA Engineer link (2019.0). If you wish to use any of the existing databases or any pre-defined customised databases, you can import the user databases using the import database option in mapping tables or you copy them into the folder C:\ProgramData\CADS\Revit to SCIA Engineer\Revit 20xx\Mapping Databases.

#### 4.1 Revit and SCIA Engineer licensed on the system

- Check in the *Release Notes* whether the Revit version is compatible with the version of *CADS Revit SCIA Engineer link* you wish to install on your system. If yes, then continue with the installation, or else install the required version of either Revit or SCIA Engineer.
- Run CADS Revit SCIA Engineer link installation and select the options as prompted in the dialogs.
- Finish the installation.

#### 4.2 Only Revit licensed on your system

- Check in the *Release Notes* whether the Revit version is compatible with the version of *CADS Revit SCIA Engineer link* you wish to install on your system. If yes, then continue with the installation or else install the required version of Revit.
- Run CADS Revit SCIA Engineer link installation and select the options as prompted in the dialogs.

#### **4.3 Only SCIA Engineer licensed on your system**

*CADS Revit SCIA Engineer link* installation is not required. As long as you have the *ESA RevitLink* (*ESA.21*) module installed and licensed on your system you can export or import the \*.*R2S* file from *SCIA Engineer* as explained in <u>Section 5</u>.

### **5** Basic commands

In order to transfer the model from Revit to SCIA Engineer, you must specify the following:

### 5.1 Code of practice

tions Vational Code Vational C	Options	D Yes No No Slab Foundation block
Import from SCIA Engineer	Ignore load combinations Ignore load(s) Ignore member release Ignore stabs Ignore support(s) Ignore walls	No No No No No No No
Mapping details	✓ Import	
Revit family path Mapping tabl Family type mapping Layer mapping	Setting this option to "Yes" will e	export elements to SCIA Engineer in different

Figure 5-1: CADS Revit SCIA Engineer Link - National Code

Select the National Design Code you wish to use in SCIA Engineer before exporting the mode from Revit. *CADS Revit SCIA Engineer Link* will automatically select the appropriate SCIA Engineer template to create the model.

The first time you import a project from SCIA Engineer into Revit, ensure that you create a new Revit file and select the correct template file as per the country code used for creating the job in SCIA Engineer.

Template file	
Church and Townlate	
Structural Template	✓ Browse

Figure 5-3: Revit - Choose template dialog

You may choose any customised Revit Structural template file as well, but make sure that the units are the same as those used in the SCIA Engineer model. For example, if the SCIA Engineer model is created in Metric units, then the Revit Structural template should also be in Metric.

Ensure that the Revit libraries of structural members are available in the default Revit installation folder, for example the library of UK cross sections are available in the following folder for Revit 2018 by default.

#### 5.2 Mode of Export

There are two ways in which a model can be exchanged between Revit and SCIA Engineer:

- *Direct exchange method*: In this method the model is transferred directly between Revit and SCIA Engineer without the need of any data exchange file. You must have both Revit and SCIA Engineer licensed on your system to use this method of model exchange.
- *R2S file exchange method*: If you have either Revit or SCIA Engineer licensed on your system then you can exchange modes using a data exchange file in the *\**.*R2S* format.

Should you wish to transfer a model using the *Direct exchange method*, you should set the option *Mode of Export* to *Direct Exchange*.

CADS Revit SCIA Engine			ingineer Link -> (		×

Figure 5-6: CADS Revit SCIA Engineer Link - Launch SCIA Engineer

-

The matrix below shows how the CADS Revit SCIA Engineer Link works when you use the export or import feature from Revit or SCIA Engineer.

	Revit		SCIA Engineer	
	Export	Import	Export	Import
Mode of Export = Direct Exchange	Invokes SCIA Engineer automatically with the same file name and folder location as that of a Revit Structure job.	Imports the SCIA Engineer job into Revit #	Prompts you to specify the file name for the *.R2S <i>file</i> you wish to create which can be imported into Revit.	Prompts you to select the *. <i>R2S file</i> you created / modified from Revit.
Mode of Export = File Exchange	Prompts you to specify the file name for the *. <i>R2S file</i> you wish to create which can be imported into SCIA Engineer.	Prompts you to select the *.R2S file you created/modified in SCIA Engineer.		

Figure 5-7: Model export & import matrix

<sup>#</sup>Owing to certain programming API limitations, while importing the job into Revit you might get an error message 'Unable to find SCIA Engineer model'. In such cases, please follow the following steps:

- 1. Save the job in SCIA Engineer
- 2. Close SCIA Engineer
- 3. Open Revit
- 4. Create a new job with Structural template
- 5. Save the new job with a dummy Revit file name, e.g. Test.rvt
- 6. Export the job to SCIA Engineer with Mode of Export as "Direct Exchange"
- 7. A new session of SCIA Engineer will be created. Open the original job (point 1) in this session of SCIA Engineer
- 8. Now import the SCIA Engineer job into Revit

#### **5.3 Version of SCIA Engineer**

You will have to select the SCIA Engineer version you wish to use for export/import of models.

Revit -> CADS -> CADS Revit SCIA Engineer Link -> Options -> Actions -> SCIA Engineer Version -> Browse -> Add

Figure 5-9: CADS Revit SCIA Engineer Link - Add SCIA Engineer version dialog

Click on the *Add* button to select the SCIA Engineer root folder as shown below:

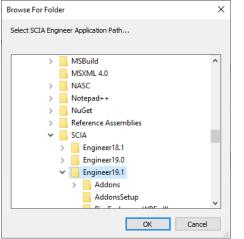

Figure 5-10: CADS Revit to SCIA Engineer Link - Browse for SCIA Engineer folder

Select OK and then Close the previous dialog.

#### 5.4 Case 1: Export from Revit to SCIA Engineer

#### Revit -> CADS -> CADS Revit SCIA Engineer Link -> Export

You can export the structural model in Revit to SCIA Engineer using the *Export / Review & Export* option.

Options	Consistency	Review & Export	Show Unexporte	Review &	Select Imported	Mapping tables	<ul> <li>Getting Started</li> <li>Best Practices</li> <li>Help</li> </ul>	r∰ Check List (ĵ) About
		Review & B	Export	CADS Revit SC	IA Engineer L	ink		
		Export						

Figure 5-11: CADS Revit SCIA Engineer Link – Export

CADS Revit SCIA Engineer Link application will read the Revit model, and prepares the list of the total number of elements from each category that is to be exported. The application then exports the Revit model into SCIA Engineer based on the stings listed in "Options" dialog.

On completion of the export routine, the Log dialog shows a summary of the number of items exported. You can save a log file which can be opened in a text editor to review the transfer. Please save the Revit model once the export is completed in order to enable the review manager to track the changes for subsequent export.

After export, for any reason, you make some changes to the Revit model and export it to SCIA Engineer and you may want to review the changes to the model. In this case you may choose the Review & Export option which updates the SCIA Engineer model.

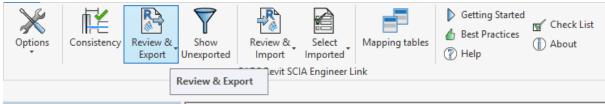

Figure 5-22: CADS Revit SCIA Engineer Link - Export model from Revit to SCIA Engineer

Using the *Review & Export option, the application* will open the review manager that will list the changes to export by comparing the current Revit model with the last exported model. Please refer to the Help document for more details on this feature.

*CADS Revit SCIA Engineer Link* will open an instance of SCIA Engineer and create a SCIA Engineer model with the same file name as that of Revit. You may either choose to create a new SCIA Engineer file or overwrite an existing one by setting the following option.

Revit -> CADS	-> CADS Re	vit S	SCIA Engineer Link ->	Options -> Expo	ort to SCIA Eng	gineer -> Crea
CADS Revit SCIA Engineer l	.ink				×	
Actions		0	ptions			
National Code	EC - EN 🕓		/ Export		~	
	Direct exchange		Internal edges with beams	No		
Mode of export	Direct exchange	1	Revit foundation slab as	Slab		
SCIA Engineer version	17.1.76.32		Revit isolated foundation as	Foundation block		
SCIA Engineer version		~	Export / Import			
Export Selected Items Only			Ignore load combinations	Yes		
Export to SCIA Engineer			Ignore load panels	Yes		
			Ignore load(s)	Yes		
Autodesk Revit <sup>®</sup>			Ignore member release	Yes		
SCIAENGINEER	Create new		Ignore slabs	No		
Deinendincent			Ignore support(s)	Yes		

Figure 5-133: CADS Revit SCIA Engineer Link - Create new SCIA Engineer file

When the option *Create New* is *un-ticked*, only the changes in the model will be updated to the existing SCIA Engineer file. Where the model is being transferred for the first time then *CADS Revit SCIA Engineer Link* will automatically create a new SCIA Engineer file (\*.ESA) with the model.

If the option *Create New* is *ticked*, *CADS Revit SCIA Engineer Link* will overwrite the entire model information in the SCIA Engineer file. If an existing SCIA Engineer file with the same name is available then the old data in the file will be completely replaced by the new model data.

Solution of the set of

For the *File exchange method* of model exchange, the \*.*R2S* file generated from Revit can be imported into SCIA Engineer using the *Import* or *Update* option.

Figure 5-154: SCIA Engineer - Update Revit file

The Update option will update only the changes to an existing SCIA Engineer file.

### 5.5 Case 2: Import from SCIA Engineer to Revit

Figure 5-16: CADS Revit SCIA Engineer Link - Import model from SCIA Engineer to Revit Structure

You can import a SCIA Engineer model into Revit Structure using the *Review & Import / Import* option.

Click on *Review & Import* to track the changes between the SCIA Engineer model and the current Revit model.

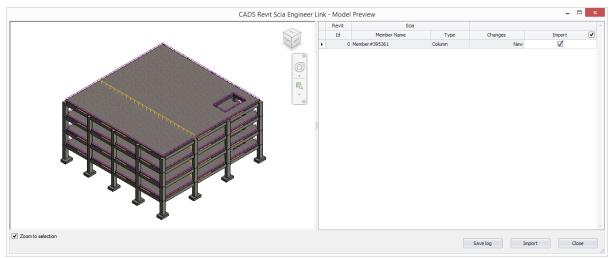

Figure 5-17: CADS Revit SCIA Engineer Link – Review & Import – Model Preview

Please refer to the Help document for more details on this feature.

First, set the standard Code of Practice and ensure the cross section library is mapped correctly before starting the import as detailed in <u>Section 5.1 Code of practice</u>.

You may import the model into Revit from SCIA Engineer using the \*.R2S file too.

In both cases, you can use the *Select Changes* option to highlight the new or updated elements.

#### Revit -> CADS -> CADS Revit SCIA Engineer Link -> Options -> Select Imported

Figure 5-19: SCIA Engineer - Export Revit file

#### 5.6 Mapping tables

The standard cross section and material libraries in both Revit and SCIA Engineer are comprehensive but are labelled differently. Therefore, *CADS Revit SCIA Engineer link* is shipped with a pre-installed mapping databases which matches materials, cross-sections and profile sheets between SCIA Engineer and Revit.

In many cases, the users may require to use custom families in addition to the standard families. In such cases, the pre-defined database which contains the entries of standard material mapping or the section mapping is not enough to transfer the data between Revit and SCIA Engineer. Hence it is necessary to have user mapping to map the custom Revit families with equivalent SCIA Engineer materials/ sections.

The "Mapping Tables" command will allow the user to create their own database for custom family mapping. On the first use of *CADS Revit SCIA Engineer Link* the user table will be blank. The application will allow the user to add/create new entries for any new family (cross section) / material / profile sheet.

ł				

Figure 5-4: CADS Revit SCIA Engineer Link - Mapping tables

The application will also allows the user to save and export the mapping database and this file can be shared across the users. The "Import" option will allow the user to load any database into the project and use them during export/import. For more details on mapping tables, please refer to the help document.

### **6** Features

Structural elements present in Revit or SCIA Engineer can be exchanged between the two applications, provided both the products support them. For example, you can apply a *Moment in node* in SCIA Engineer but there is no equivalent feature in Revit, hence it will be ignored when you import a model into Revit from SCIA Engineer.

Similarly, structural properties may be known by different names, but are mapped based on their role. For example, the 'line support', known as *Boundary Condition – Line* in Revit is equivalent to *Support – Line on Beam* or *Support – Line on 2D Member* in SCIA Engineer.

A complete list of features supported is available in the Help file.

Revit -> CADS -> CADS Revit SCIA Engineer Link -> Help -> Introduction -> Bi Directional Link between Revit and SCIA Engineer

Figure 6-1: CADS Revit SCIA Engineer Link - Help button

All structural elements present in a Revit project will be exported to SCIA Engineer if the configuration option *Export Selected Items Only* is *un-ticked*. This includes all the members physically present in the Revit project irrespective of whether the *Work sets* they lie in are active or not.

Figure 6-3: CADS Revit SCIA Engineer Link – Options – Node Format

Structural members visible in the Revit job but linked to external Revit or other CAD files will not be exported, for example linking an external Revit file using the *Insert->Revit Link* option.

You may choose to export only the selected members by ticking the configuration item *Export Selected Items Only*. This option could be very useful when you have a very large job but would like to analyse the structure in parts or would like to send updates for only a few members.

There is no such option available when you export the job from SCIA Engineer. All structural elements present in SCIA Engineer will get imported into Revit.

#### 6.1 Log of events

Whenever you export or import a model from Revit Structure, a log of important events is created. For example:

"UC356x368x202" is mapped as "UC356/368/202"

Doors | Doors 4 - 225505 : Not exported as this is not a structural element!

Where 225505 is the member ID in Revit

The log will list the different categories of items present in the model and their status.

90	CADS Revit SCIA Engineer	LINK				:

			1 2		Close	Save Log

Figure 6-4: CADS Revit SCIA Engineer Link – Save Log file

It is recommended to save the log as a \*.RTF file using the Save Log button for checking and version control purposes.

Items which are successfully exported or imported are marked in blue. Elements that could not be exported/imported or have some issues attached to it are marked in red. You can highlight the affected member in Revit by using *Manage->Select by ID* option in Revit.

In the absence of a review manager, this is a very good option to highlight the elements marked in red in the log file and then take appropriate corrective action to export/import the member again.

#### **Revit SCIA Engineer link - Getting Started**

		leted!			Structural Foundations - 258458 : Not For Analysis	

Figure 6-5: CADS Revit SCIA Engineer Link – Error checking in log file

For example in the above log file, a warning that the analytical line is not in the proper position is given for floor slab 227544. You can use the *Manage->Select by ID* option in Revit to highlight the slab and take the required action.

Manag	e Add-Ins	Modify 🔺	*					
uctural	Additional .	Coordinates •	Add to Set     Pick to Edit		Manage	Manage Images	Phas	A Load WN Select by ID
ttings	Settings	Position •	Options Main Model	*	Links	🔁 Starting View	ſ	
		Project Location	Design Options		l. I	Manage Project	Phas	Select by ID
								Uses an element's unique identifier to locate and select the element in the current view.
								When an error message displays the ID of a problematic eleme you can use this tool to locate the element.
								Press F1 for more help

Figure 6-6: Revit - Select by ID

Sele	ect Elements by	/ ID
D - (use semicolon f	for multiple IDs):	
227544		

Figure 6-7: Revit - Select elements by ID

You may then change the required member attributes and send only the selected elements using the option *Export Selected Items Only*.

#### 6.2 Rotation

*CADS Revit SCIA Engineer Link* has developed the mapping logic based on the default cross section library supplied with Revit. Since the *Revit family* implementation logic is not uniform in Revit you might find that the log file shows a message such as *Member rotated*. This is done to ensure that the cross section's handing (plane about which a cross section is mirrored) and orientation (member rotation about its centroid) with respect to the model are maintained in both Revit and SCIA Engineer.

This is generally not a problem with symmetrical sections, but with asymmetrical sections you might find that some sections are transferred with a different handing or orientation. In these cases please check if the *Revit family* used for member mapping is a custom made *Revit Family* or a default one

supplied with Revit. For a custom made *Revit family* try changing the variables which affect member handing and orientation and use those values which gives the correct result. Please get in touch with the <u>CADS Support</u> team if there is any issue with the cross sections library supplied with Revit.

#### 6.3 Eccentricity

CADS Revit SCIA Engineer Link ensures that the member eccentricity is correctly updated during the model exchange between Revit and SCIA Engineer. Since the parameters required defining eccentricity is different in Revit and SCIA Engineer, you may find the eccentricity parameters showing slightly different values, but the relative position of the member with respect to the centre line is maintained.

#### 6.4 Support

Foundations and Boundary conditions can be exported from Revit to SCIA Engineer either as a foundation block or as supports. These can be specified from the configuration option Export Revit Foundation. If it is set to Support then the foundations are exported to SCIA Engineer as Fixed Supports, otherwise the foundations are exported as Foundation Blocks in SCIA Engineer.

CADS Revit SCIA Engine	er Link		gineer Link -> Options		×
Actions		0	Options		
National Code		~	Export elements based on layers Export reinforcement as PRAD	Yes Yes	^

Mapping details			Analysis Results	No	~
Revit family path	Mapping tables Layer mapping		Revit isolated foundation as solated foundation will be exported as four	dation block or support.	

Figure 6-2: CADS Revit SCIA Engineer Link - Export Revit isolated foundation as option

If you have placed any *Boundary Conditions* (*Point, Line* or *Area*) in Revit then it will get exported as supports in SCIA Engineer with the same translational and rotational stiffness values as specified in Revit.

When a job is imported into Revit from SCIA Engineer for the first time the supports are ignored and they do not get imported as Revit *Foundataions* or *Boundary Conditions* since *CADS Revit SCIA Engineer Link* has no information about its structural usage. But if the model is first created in Revit using the *Boundary Conditions* feature then when you edit the support condition in SCIA Engineer and import it back into Revit, it recognises that the supports were mapped to *Boundary Conditions* and will update it with the modified values.

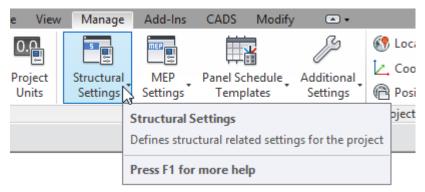

Where the support parameters are modified in SCIA Engineer and you do not wish them to get overwritten during the next export from Revit, set the configuration option *Ignore Support* to *Yes*.

			Analytical Link auto detect:	300.0
1ember Supports Check ✔ gircular references				
nalytical / Physical Model Consistency Check				
Analytical model connectivity				
$\mathbf{V}$ Analytical model adjusted away from default location				
Analytical Beam and Floor overlap check				
Percible instability based on release conditions				

*Figure 6-5: Revit - Member supports* 

#### 6.5 Loads

Loads modelled in Revit can be exported to SCIA Engineer and you can import them back into Revit after modifying them in SCIA Engineer. You may also choose to model loads in SCIA Engineer and import it into Revit.

The self-weight of the structural member is not exported to SCIA Engineer from Revit. You may change the load values if required in SCIA Engineer using SCIA Engineer's standard product features.

If the user is not interested to import the generated loads, they can be ignored by choosing the "Ignore generated loads options to "Yes".

Please refer to the features list in the *Help file* to check how the load types are mapped between the two applications.

Bi-Directional exchange of load cases and load combinations are also supported by *CADS Revit SCIA Engineer link*. Structural Engineers may choose to ignore load cases and load combinations specified in Revit and handle them in SCIA Engineer separately. You can opt to ignore load cases and load combinations in Revit by setting the configuration option *Ignore Revit Load Combination* to *Yes*.

Revit -> CADS -> Revit SCIA Engineer Link -> Options -> Filters -> Ignore Load Combinations

tions		Opt	tions		
lational Code EC - EN	$\sim$		Export elements based on layers	Yes	
	ultranet in the		Export reinforcement as PRAD	Yes

Figure 6-6: CADS Revit SCIA Engineer Link - Ignore load combinations option

### 6.6 Composite Slabs

Composite slabs and Roof decks modelled in Revit can be exported to SCIA Engineer and you can import them back into Revit after modifying them in SCIA Engineer.

The composite slab decks are modelled in Revit as an assembly. The composite slab data are transferred from Revit to SCIA Engineer by reading the appropriate materials and dimensions of the different layers of the slab. A separate mapping database is used to automatically map the standard profile sheets from Revit and SCIA Engineer.

Non-standard (user defined or user modified) families of profile sheets decks are not directly supported, but they can be exported to SCIA by mapping to the equivalent profile sheet.

If you have the composite beam design info for the members in SCIA Engineer, the design info will be imported into Revit. The design info includes camber, studs and the end forces on the member.

#### 6.7 Virtual Joists

Steel bar joists modelled in Revit can be exported to SCIA Engineer as virtual joists. Virtual joists are light-weight steel truss which consists of parallel chords and a triangulated web system. Standard mapping database is used to map the steel bar joists with the equivalent virtual joists. You can modify the virtual joists in SCIA Engineer.

After performing the design, if you store the design info, the steel bar joists in Revit will be updated with the joist designation specified in the design info. The end forces are also imported into Revit as member forces.

For Joists Girders, the number of joist spaces and the point load on each panel will be updated while importing the model from SCIA Engineer.

#### 6.8 Levels

When the model is imported from SCIA Engineer, the user may specify how the levels are to be created in Revit. The user may optionally choose to create the levels based on the height of *Stories* if defined in SCIA or based on the elevations of slabs or based on the Z coordinates of the elements. The offsets on the elements in and their levels in Revit are set according the geometric position.

#### **6.9 Reinforcement**

CADS Revit SCIA Engineer link allows the user to import the user defined (Input) reinforcement from SCIA Engineer to Revit. CADS Revit SCIA Engineer link v 2020.1 also supports the import of practical reinforcement (Real bars converted from reinforcement design for 1D members) from SCIA Engineer to Revit. The 2D reinforcements defined for the slab will be imported as "Area reinforcement" in Revit.

For more details on import of reinforcement, please refer to the Help document.
